

CASE STUDY

House of Worship

FELLOWSHIP ALLIANCE CHAPEL

Project Scope

Services Offered - Consulting, Acoustics, AVL System Integration, Digital Audio Network, Custom Curved LED Wall, Video Distribution, and Streaming Services

Fellowship Alliance Chapel's "Kingdom Vision" project was set to expand their sanctuary by more than doubling their seating capacity. The AVL system was an integral part of the expansion. Horizon AVL system integration provided consulting, acoustics, and theatrical LED lighting with cutting edge steerable line array technology and a custom LED curved video wall that creates a "WOW" factor. Horizon AVL's powerful and impressive system design enhances each message that the pastors share and sends its own simple message that God is worthy of receiving the best and full attention. The Horizon AVL system adds clarity, excitement, and excellence to FAC's vision that came to life.

Fellowship Alliance Chapel and Horizon AVL were featured in Worship AVL Magazine in the June 2017 issue.

AVL SYSTEM INTEGRATION

Project Highlights

Broadcast Suite

A broadcasting suite was designed for both internet streaming and campus wide audio/video distribution. As the church is able to display content throughout the campus, more congregants are able to enjoy the service and receive updates and announcements. Streaming capability provides at-home viewing options for those who cannot attend the service in person. (Analog Way controls the unique 35:8 format LED wall and Standard 16:9 Broadcast Signal.)

Presonus Line Array

This cutting edge steerable line array from PreSonus allows you to shape the sound to the room so congregants have the same sound experience no matter where they are seated, including the balcony.

LED Video Wall

This custom 68' LED wall provides a future-proof solution for stunning video and graphics.

Welcome Center

The distributed broadcast signal throughout the Welcome Center allows congregants in the cafe and lobby area to enjoy the service.

“Horizon walked us through step by step laying out all of the best options that fit our congregation, our budget, and our desire for what AVL integration would look like in our new facility. –Nick Simpson, Worship Media Pastor”
