

CASE STUDY

Corporate

MCCOLLISTER'S TRANSPORTATION

Project Highlights

Services Offered - Consulting, System Design, Wireless Video Distribution, Sound Masking, Audio Distribution, AV Integration, and Paging System

Main Office

McCollister's wanted an open floor concept that contained different departments. Horizon designed a system for their main office space with Speech Privacy's sound masking solution (Privacy Systems) that allows communication with clients, truck drivers, and operations without noise disturbing working employees in the open floor space departments. The sound masking also includes a paging system that is integrated into their digital IP phone system. Background music can be played through the system, throughout their space. McCollister's particularly requested this feature for their in-house events and holiday parties.

Executive Office

The Executive Board Room features a 103" Panasonic display that came from the World Trade Center Museum proudly serves the purposes of collaboration and communication during executive meetings.

Conference Rooms

McCollister's conference rooms were included in the AV design. The Crestron Mercury system was chosen for simple team collaboration, audio conferencing, and wireless Air Media Video Distribution.

Training Room

In the Training Room, a Sharp LCD display allows for comprehensive company training.
