Services Offered - Consulting, System Design, Set Design, Broadcast Installation, AV Installation, LED Wall, Schoolwide Paging, Communication, and Safety

Bell, Public Address, & Paging

The Ocean City project includes the Harman AMX Schoolview system which allows the district the opportunity to distribute content from the television studio throughout the school.

Classroom technology is integrated with district-wide broadcast ability. The comprehensive paging system aids in safety concerns and emergency management. In the event of an emergency or lockdown, information can be displayed on the classroom screen and pertinent information can also be broadcasted district-wide.

Harman AMX Schoolview allows for school-wide communication, and includes classroom alerts and monitoring when combined with the camera solution. If the classroom triggers an alert, the main hub is alerted and presents an active feed to/from the classroom camera. The classroom microphone communicates with the hub.

Theater

The Ocean City theater needed modern updates. Horizon AVL chose the Allen & Heath Digital Console, along with RCF line arrays for the solution.

TV Studio

Horizon AVL also designed Ocean City's modern TV studio. Horizon incorporated emergency management systems into the functionality of the tv studio. Administration can make announcements with the Schoolview System district-wide from the tv studio. The customary designed studio serves as a model studio for other schools.
